Tasks for Iteration 2

Tasks and description:

1. Test controller

Make controller test cases for Person, Food and Attended_Event. All the test cases should be carefully designed and implemented.

Evaluation:

The test cases should cover all the possible scenario and give right assertion as well as passed.

2. Display attended Event

Get the list of the events I attended on a separate page and link it with the Home page. Need authentication for the history page.

Evaluation:

Only the current user can see this page. The information should be correct.

3. Confliction notification

If user push the attend button for two or more event in the same day and time, there should be a pop-up window that notify user of the confliction.

Evaluation:

Push the attend button for 2 events in the same time. Check if there is a pop-up window.

4. Display Maximum and Attend

Get the number of attendants for any event and (if present: maximum number of attendants) on the event detailed page.

Evaluation:

Check the specific information in the Event Detailed Page.

5. Design layout:

Design the layout of page: History Page, sort Event Page, registration Page.

Evaluation:

Check the layout of the pages mentioned above.
